Fast RIP. Hi-Fi color. White ink made easy.

Production RIP software for Epson printers and China-board DTF, UV and roll printers.

1. Native 64-bit: faster and more stable

A 32-bit program can use only **2 GB** of memory, however much memory your PC has. A 64-bit program can use **as much memory as your system has**. That means faster ripping, a faster system overall, and much better stability.

- Native 64-bit executable
- Multi-threaded halftone and image processing
- Image enlarge mode: 600×5000 banner (SC4180H1) 3:05 → 0:51, 3.6× faster*

2. Epson DTF: roll output and one-pass white

Print **white and color together in one pass** on small Epson DTF printers, on **roll** or sheet. Verified on the Epson XP-15010 and the L805 / L1800 series.

- **EPS:** the white ink area is taken from your vector design, as you drew it
- **PSD / PNG:** transparency becomes white automatically
- **TIF:** mask channels for full control

3. Color management (CMS) built in

Make your own **density files** with Density Read and a spectrophotometer, then build profiles inside the RIP. Density Read is included in the standard version — nothing extra to buy.

*Standard mode 3:05 vs enlarge mode 0:51 on a 600×5000 banner, SC4180H1. Results depend on printer and file.

4. 6-color and 8-color Hi-Fi, with white

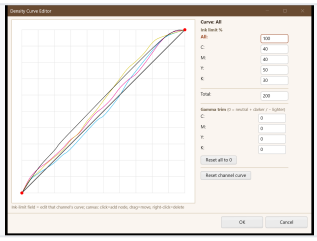

6C: CMYK + Orange + Green · **8C:** CMYK + Orange + Green + Red + Blue · plus white mode for DTF and UV printers.

5. Easy to use: see it, choose your skin

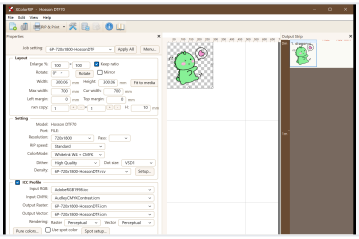

Job queue, preview, output strip and live status on one screen — and skins to suit your shop.
